_eft Footer	Center	Right Foote
Chief Judge Sid Adriaensen	Homologator Gilbert Joseph	Scorei Dany De Bakkei

## Print setup (Page Header & Footer):

This window serves to input the data that will be printed on all documents.

#### Print setup (Disposition) :

This window enables the user to adapt the standard page settings. It is not necessary to adapt the settings that are standard to the program.

## Print setup (Image):

This windows provides the user with the possibility to insert an image from a file and place it anywhere on the page.

#### **Event Schedule:**

This window enables the user to print the entire event schedule with the start listings of each discipline, category and/or series. Only when the event schedule has been constructed via **Competition + Events Schedule**.

# Several options in all print program windows under PRINT.

Load listings: in the column **Print**, tick the boxes next to the disciplines, categories and/or series that you wish to bring together in one list, then save it and name it under **Save listing**. The listing has now been created. You can add listings by clicking via Load listing and delete them via **Delete listing**.

On the above bar, the user can disable the filter – if such a filter has been setup before – by clicking the icon  $\checkmark$ , as well as select the day, the round, the event and the category.

**Form to print:** here, the user can decide which form he uses to print by clicking **Form to print** next to the chosen category. An arrow appears on which the user can click to show a list and select a document to print.

**Break:** this option serves to insert a break between pages: tick the boxes under **Break** next to the categories after which you wish to insert a break.

Printing options: tick the boxes of the several that will be printed.

Close: close window.

Print: print document.

Preview: screen preview of the documents that are selected, to check one last time before printing.

Export to file: the user can export the selected documents to several kinds of text files.

#### Print setup

#### **Printer configuration**

#### List of skiers:

In this window, the user can print several lists of participating skiers, teams, etc that he has inserted before the competition. Several boxes can be checked at the same time; the order is shown in the first column.

#### **Team classifications:**

The user can print the results according to country/team/club etc if the competition requires such a classification. Check the data you wish to print. Several boxes can be checked at the same time; the order is shown in the first column. In addition to that, it is possible to select a detailed list with an enumeration of all the skiers that are entitled to this classification. All this is only possible after having input the teamresults and selected the country/team/club etc.

### **Printer configuration:**

This window enables the user to setup the printer configurations. The last setup will be saved, and after changing printers, it is necessary to adapt the settings.

Ok Cancel	Ok Cancel

#### **Competion Setup – Display:**

- **Display as Team 1:** the name of the team ranking, if the competition requires that. This will determine the name that will be printed on the documents as well.
- **Display as Team 2:** possibility of another name, similar to **Team 1**.
- **Display individual skier indicator (\* star):** this box is to be checked if individual skiers participate in the competition. A star will be be in the skiers country/team/club column, and the skiers combinatino results will not be taken into account for the general combination classification.
- Display bib number: When the box is checked, the BIB-numbers will be printed on the documents.
- **Time per skier:** the user can input the times that are necessary for each round and discipline, which can be of helpt to compose the competition schedule. The standard configuration are the regular times.

#### **Competion Setup - Classification points:**

This window will only be used when a classification is to be made on a basis different from the combination method – for instance according to club, or cup points.

Skier's data: (this menu is also accessible via the icon

To input all the skiers' specific data, click . Every skier has to be inserted with an ID number – if not, the system may not accept the skier. The box of **Team Member** is to be unchecked if the skier's combination points are not to be taken into account for the classification.

In the column **Skier**, a list of the already inserted skiers appears, followed by their respective data in the next columns. The order of the columns can be adapted by dragging them with the left mouse-button.

During the competition, it is always possible to modify the skiers' list by either adding or deleting skiers. If the user modifies the list after the starting lists have been made, he should take into account that those starting lists need to be remade.

All skiers that have participated in a RC competition of the past years are included in the "Waterski Scoring" file. When the first letters of the skier's name are put in, a list automatically appears where the user can select the skier and his data. When the user clicks on **Skiers scores**, he can consult which best scores have been put in in the program, and those can always be adapted via **Performance**.

<u>Caution</u>: by using this method, the user should check whether all other data correspond with those of the competition the skier has subscribed to. The relevant list can be consulted via Administration  $\rightarrow$  Classic parameters  $\rightarrow$  Skier database.

# **Events Schedule:** (this is also accessible via $\bigcirc$ )

This window is used to input a number of competition data line after line as mentionet beneath. If data have been input through the **Competition Setup Assistant**, they will appear here.

In the upper part of the window, it is possible to create a new line by selecting a new line and then clicking [a], or deleting a line by selecting a line and then clicking [b].

Other than these, the upper part of the window does not allow for any other modifications: this is only possible within the following menus.

- Event scheduled on: date and time of start and end of the event's several events and/or series.
- Displayed time: only function such as time, following and non-stop are available.
- **Round:** the several rounds
- **Event:** the several disciplines.
- Selection: the sex, the several disciplines, series and divisions. If the user clicks on , a table appears with the available options.
- **Event Name:** normally, this is automatically linked to the name that the user has selected under Selection, but it can be modified if necessary.
- Lake: name or number of the competition water if the competition takes place on different locations.
- Homologation: the homologation level of category and/or series.
- Number of skiers qualified for this round
- Number of judges: the number of judges that are effectively judging for the category or series.

- Slalom starting speed: the minimum starting speed for the selected category. When the user clicks on , a table appears with the several categories and corresponding starting speeds, which he can modify according to his wishes.
- Number of jumps: the number of jumps per round for each category and/or series.
- Comments: the user can add informative remarks here, which will not show on any document.

The standard data of th window **Events schedule** are set up automatically when the user creates a new competition via **Competition Setup** Assistant, so the user does not need to input the data again, unless he wishes to modify them.

Using the arrows (a), the user can arrange the lines according to e.g. starting order, day, time, etc.

The data that are input in **Event Schedule** can also be printed [2] or consulted on screen [2].

#### Individual classifications setup:

In this window, the user inputs a number of competition data, line after line as mentioned beneath. If data have been input through the **Competition Setup Assistant**, they will appear here.

In the upper part of the window, it is possible to create a new line by selecting a new line and then clicking , or deleting a line by selecting a line and then clicking .

Other than these, the upper part of the window does not allow for any other modifications: this is only possible within the following menus.

- **Event:** the several disciplines.
- Simple classification: input of the basic method with which the competition's classification will be made.
- Classification Method: select the method of classification per category/series.
- **From rounds:** tick the boxes of the rounds of which the classification should be made according to the selected **Classification Method**.
- **Tie break:** to determine the final classification in case of multiple rounds and not all skiers have participated to all rounds.
- **From rounds:** tick the boxes of the rounds of which the classification will be made with the selected **Tie break**.
- Official classification: the user should leave this box checked in order to import the results in the Ranking List.
- **Classification mode:** choice of the calculation method according to the competition regulation, the overall result or the result for a certain category/series. (When the slalom ranking is made up for all age categories and both sexes together, it is possible to do that without taking the maximum speeds (55 / 58 km/h) into account. When the skier does not finish the first track, he is ranked according to the number of buoys he has made and not according to the minimum starting speed.).
- Selection: selection of sex, several disciplines, series and divisions. When the user clicks on  $\Box$ , a table appears with the available options from which he can select.
- Classification's name: this name is usually linked automatically to the one that the user has chosen under Selection, but it can be modified.
- Comments: the user can add informative remarks here, which will not show on any document.

The data **Event, Selection** and **Classifications name** of this window are input automatically when the user creates a new competition via **Competition Setup Assistant** and do not need to be input separately, unless the user wishes to modify those data.

It is crucial to modify the following data: Simple classification, Classification method – among rounds, Tie break – among rounds and Event mode, these data must be input for every discipline, category, series etc according to the competition regulations.

With the following arrows  $\bigcirc$   $\bigcirc$  the user can arrange the lines according to e.g. starting order, day, time, etc.

The data that are input in **Individual classifications setup** can also be printed [a] or consulted on screen [a].

To isolate the results of a country's/team's/club's skiers in the window **Individual classification**, the user proceeds as follows:

				Print individual classifications

#### Team classifications setup:

In this window, the user inputs a number of competition data, line after line as mentioned beneath. If data have been input through the **Competition Setup Assistant**, they will appear here.

In the upper part of the window, it is possible to create a new line by selecting a new line and then clicking a, or deleting a line by selecting a line and then clicking **1**.

Other than these, the upper part of the window does not allow for any other modifications: this is only possible within the following menus.

- **Event:** the different disciplines.
- Take team from: selection of the name under which the ranking will be made: country/team/club etc
- **Rounds:** the number of rounds, according to which the ranking will be made up as prescribed by the competition regulations.
- **Classification's name:** the standard name according to the data under **Classifications name**, but it can be modified.
- Skiers count: number of skiers that are to be taken into account for this ranking.
- Selection: selection of sex, different disciplines, series en divisions, when the user clicks on in appears with she available options.
- Max skiers per categorie: possibility to set a limit to the number of skiers that are taken into account per category for this ranking (exceptional).
- **Max points per skier:** possibility to set a limit to the amount of points a skier can receive highly exceptional, only when the competition regulations require this.
- Weight: possibility to input a number that percently mutiplies or divides the total amount of points highly exceptional, only when the competition regulations require this. Standard configuration is 1, which is the number that is normally used.
- Comments: the user can add informative remarks here, which will not show on any document

#### Split in to series:

This is used for large competitions to split the skiers of several disciplines up in series according to their previous best results.

The user can use the above bar by clicking in , selecting the way in which the series are going to be made up, the event and the category.

- **Classification:** selecting event and category that the user wishes to split up in series. By clicking the arrow next to the field **Classification**, a table appears with the available options.
- Close: closing the window
- Save: saving the data
- Clear series: deleting series to create a new one.
- Set serie to selection: possibility to make individual modifications by selecting the skier, inputting the number of the series in which the skier must start and clicking **OK**.
- Set all series: upon clicking thus button, a window opens, in which the user can input the number of skiers per series. After clicking on **OK**, the series is created. In the column **Series**, the series' number will appear automatically for all skiers. The user can start all over again by clicking **Clear Series**.
- Make series using: selecting the way of selection: points in competition or classification of Standings List. <u>Caution</u>: to make use of this, Create a performance classification per event for each category and division should be checked, as well as the mention of the classifications method in the window Classification of the Competition

**Setup Assistant**. Or on the competition results of a previous round.

🎢 (All days) 🔽 (All rounds) 🛛 🔽 (All events) 🔽 All skiers 🔽

On the bar of the following windows, the user can disable the filter by clicking  $\checkmark$ , and he can also select day, round, event and category.

# Make starting lists: (this part is also accessible via 😿 )

This window enables the user to create starting lists. The user selects the discipline, category or series of which he wants to create a starting list in the upper part of the window. Next, a list of the skiers that meet with the user's selection criteria appears in the window's lower part. The following actions are now possible:

- Close: closing the window
- Save: saving the data
- **Random:** making up a starting list by drawing lots.
- Clear: deleting the created starting list.
- **Reverse:** reverse the created list.
- From standing place: creating a starting list by reversing the Standing List ranking.
- From classification: creating a starting list by reversing the ranking from the competition results. Upon clicking on From classification, a separate window appears in which the user can select event, category or series. The user inputs the number of skiers (input 0 for all skiers) and finish by clicking OK. This feature is only available if results of previous round have been input.
- **Copy start list:** copying a starting list of a previous round. A separate window appears where the user can select the discipline, category and/or series which he wishes to copy. Click OK to finish.

It is possible as well to create a starting list manually by inputting the numbering in the column Start.

This method applies to all disciplines, categories and series.

For the jumping competition, the program will automatically order according to the height of the ramp – low  $\rightarrow$  high. If the user wishes to order high  $\rightarrow$  low, just click on **Reverse**.

# DISPLAY

A number of features that are available in all **Starting list** windows:

- When the user clicks with the left mouse button on one of the column titles, a small triangle appears which offers the possibility to order the subscribed participants alphabetically or numerically.
- When the user clicks with the right mouse button on a field, **Imput score** and **Skiers data** appear which give direct access to the skier's data or to the result input.

# Features that apply to the several Input score windows, which include the following icons:

**First record** 

Previous record

- Next record
- 🔁 Last record
- Insert record: insert new data
- Delete record
- Post modifications: save modifications
- **©** Cancel modifications

The user can use the above bar by clicking , selecting the way in which the series are going to be made up, the event and the category.

## Starting list: Tricks (also accessible via

The user can input the tricks via the window **Input score** by clicking on **Declared tricks** upon which a window appears where all tricks provided on beforehand by the skier can be input and saved by clicking on **Save Runs**. The declared tricks remain in the file, and can be consulted for the following rounds without having to delete the jury judgment. If a skier changes his declared tricks, this can be modified in the system without any problem.

Some standard codes to input tricks are = 1/(back in), 2SKI (tricks on 2 skis), OT (out of touhold).

Afterwards, the score can be input by clicking on Scoring Sheet. A window appears with the previously inserted declared tricks, for which the several scores can be input in the column Jg, the column Tim is for the end the 20 sec or fall. Click Save Score & Runs to automatically achieve the final result of the skier's tricks. When clicking with the right mouse button in the columns Jg and Tim, a table appears with the several codes that the user can use to input in those columns.

#### Administration:

All windows available in the Administration menu have a number of pre-assigned parameters which shouldn't be changed and are available for information and control purposes only.

## **WINDOWS**

These windows are the standard Windows displays.

# **CREATION OF A NEW COMPETITION RECORD**

**Introduction:** the items listed beneath do not necessarily have to be completed either for a competition or for the program to function. It just has to be known what exactly is applicable within the competition.

**1.** Creation of a new folder in the discipline of choice.

**2.** Afterwards the **Competion Setup Assistant** window will automatically pop up. The different basic data of the competition can be added using the different windows as follows:

Competition Setu	p Assistant		X						
Competition	This wizard will help you t	felcome to the Waterski Scoring assistant. his wizard will help you to create step by step the few aranters required to score a conception.							
Jury panel Rounds	Enter the competition nan
